1. **Declare an Empty queue s .**
2. Take Single Integer T as input.
3. For next T Lines format ($case, x(optional)$)
 - case 1. *Print* the *size* of the *queue* in a separate line.
 - case 2. *Remove* an element from the queue. If the queue is empty then print -1 in a separate line.
 - case 3. *Add* Integer x to the *queue* s .
 - case 4. *Print* an element at the *front* of the *queue*. If queue is empty print -1 in a separate line.
